

To Whom It May Concern:

I am writing this letter to recommend Cody Holland for the post of software engineer in your company. As a senior software engineer, I supervised and worked alongside Cody during his time at Event Dynamic where he worked on the Platform Team as a software engineer.

Cody worked on building portions of our ticket fulfillment system that integrated with the many external (StubHub, Ticketmaster, and SeatGeek) and internal APIs. This work was done in both Python and Scala and we still use his code and scripts at our company today. He also worked in our PostgreSQL Database where he made both data and schema changes as needed for corresponding development work. Additionally, he contributed to many bug fixes and feature improvements and was responsible for both making and reviewing Pull Requests on GitHub that went into our production environments.

Cody was also responsible for onboarding various teams into our system. This involved updates into our database, and programmatic solutions on our backend application. He worked closely with the clients and with other engineers to make sure their needs were satisfied. I have personally witnessed Cody's proficiency in multiple programming languages (Python, Scala, Java), and have seen him work both by himself and in a team environment. Cody would be a valuable addition to any development team, improving both the knowledge and the collaborative work environment.

I would like to thank you for your time, and I hope that you would consider my recommendation.

Sincerely,

Kevin Christian
Event Dynamic
Senior Software Engineer
